Subject: Re: Toutatis prediction by Meier?

Dear Pete,

Meier said that Toutatis "may threaten the earth" in September of 2004. He also stated that there were several factors which could mitigate against it actually striking the planet, among them an earth-based defense system utilizing missiles, nuclear explosions, etc. or the gravitational pull of the larger planets. Meier NEVER stated that it WOULD hit the planet. (I even have this on my DVD, which was in production last year and released this year.)

However, the Plejaren and Meier have indeed stated that there IS a deep impact scenario coming to the planet, which may now be unavoidable due to our collective lack of creating the aforementioned protective measures. They refer to this as the Red Meteor and have not revealed the date, which they claim to know, but have said that it will strike (if I recall correctly) in the area between the Bering Sea and the Black Sea (I'll have to look this up again to be accurate, my geography may be off).

As for James Randi, he is a pathetic liar and coward. Of course it must be noted that he withdrew his claim that the case is a hoax and that the international professional skeptics' organization, CFI-West, not only failed (*after three years*) to duplicate even one of Meier's photos or films as they claimed they could do but they publicly refused to have their quaint little photos of model UFOs tested as Meier's were. *End of credibility for the skeptics.*

Since I referred to Randi as not only a coward but a liar, let me give you a recent example. Within the last couple of months I did a radio show and, following my appearance, Randi was on to rebut my statements (he wouldn't face me on air). I happened to hear the tail end of his comments as I was asked to come back on the show after him. He stated that the analysis of the UFO sound recordings (made in 1980 by Meier and his wife, outdoors, on cassette machines with 15 witnesses present, including an undercover policeman) were not really examined by credible sound experts but only brought to various studios until the investigators could get someone to say they were from unknown sources and irreproducible.

You can find an excerpt from the Sound Analysis document on my site which contradicts that, of course. I have repeatedly offered these impotent bunglers the opportunity to duplicate the sound recordings themselves, with all of the

scientifically determined complexities contained within them, but they have - naturally- refused.

When you deal with people such as Randi and the other poseurs, who have been great at character assassination for many years, and put their feet to the fire all they can do is weasel and attempt to distort and distract from the truth of the case.

And, while they failed to duplicate the photographic evidence, and declined to even attempt to duplicate the sounds, they certainly can't explain the abundant, specific, prophetically accurate information that Meier has published for decades. Neither can they explain how Meier's first public coverage of his story and photos of up to 8 of the UFOs at a time date back to 1964, some 40 years ago, facts not only in evidence in the press but confirmed recently by a rather reputable retired UN diplomat...*who witnessed the Meier, the UFOs and the extraterrestrial woman as well*. Of course how can one compare the credibility of a retired member of the UN to a man whose career is based on illusion, deception and performing parlor tricks?

Add to all this the skeptics being at a loss to account for the fact that, *after* Meier lost his arm, his physical evidence INCREASED in quantity, quality and variety.

These poor bozos should stick to pulling bunnies out of a hat for kids instead of their clumsy, unsubstantiated and profoundly inept criticisms of what is the most important story in human history.

Best regards,

Michael Horn

Dear Mr Horn,

I got your email address from the rense web site posting of 4/2/04 where you responded to a sceptical person named Stephen who tried to downplay Billy Meier's amazing prediction of the name of Toutatis 10 yrs before it was discovered. I completely agree with you that Meier has demonstrated to more than a legal standard that his predictions are accurate. It is in this regard that I wish to ask you a very important question. I noticed a few days ago on the James Randi web site that he (Randi) claims that Billy Meier has predicted that Toutatis will hit the Earth on or around this

Sept when it makes its close approach. Given Meier's accuracy in predicting the name of Toutatis, I think one must give any prediction he makes about the asteroid a great deal of weight. So I must ask you, has Meier actually predicted that Toutatis will hit the Earth on or about this Sept 29th? I have not been able to verify that he has made this prediction and I thought that you would be a very good person to ask. I look forward to your reply.

Pete
